PROJECT REPORT
BLOOD BANK MANAGEMENT SYSTEM

COURSE TITLE: PROGRAMMING IN JAVA

COURSE CODE: SWE1007

FACULTY: THANAPAL P

TEAM MEMBERS:

ESHAL SHANOJ (22MIS0087)

DEVAMITHRA A M (22MIS0393)

INTRODUCTION

In the critical healthcare realm, blood banks play a pivotal role in ensuring the timely availability of safe and life-saving blood products for patients in need. However, managing the intricate operations of a blood bank can be a complex and demanding task, often involving manual processes that are prone to errors and inefficiencies. To address these challenges and streamline blood bank operations, a comprehensive blood bank management system (BBMS) emerges as an invaluable tool.

BBMS is a software application specifically designed to automate and streamline various aspects of blood bank management, from donor registration and blood collection to inventory tracking and blood distribution.

Adopting BBMS offers numerous benefits for blood banks, hospitals, and the overall healthcare system. These benefits include:

Enhanced Efficiency: BBMS automates many manual tasks, such as data entry, record keeping, and inventory management, freeing up staff time to focus on critical patient care and donor engagement activities.

Improved Accuracy: BBMS reduces the risk of human error in data entry and recordkeeping, ensuring the accuracy of donor information, blood inventory levels, and transfusion records.

Streamlined Processes: BBMS streamlines blood donation and transfusion processes, making it easier for donors to register, schedule appointments, and donate blood, while also streamlining the process for healthcare providers to request and receive blood components.

Effective Inventory Management: BBMS provides real-time tracking of blood inventory levels, including blood type, location ensuring that the right blood components are available when needed.

OBJECTIVES

The objective of this project is to develop a comprehensive blood bank management system (BBMS) that streamlines and automates various aspects of blood bank operations, from donor registration and blood collection to inventory tracking and blood distribution. This system aims to address the challenges of traditional manual blood bank management methods by providing an efficient, accurate, and user-friendly solution.

Specific Objectives:

1. Donor Management:

- Create a centralized database to store and manage donor information, including name, contact details, address and blood group.
- Enable admin to check details, add, delete and update donor details and manage stock.

2. Blood Inventory Management:

- Implement a real-time inventory management system for tracking blood inventory, ensuring optimal stock levels and minimizing shortages.

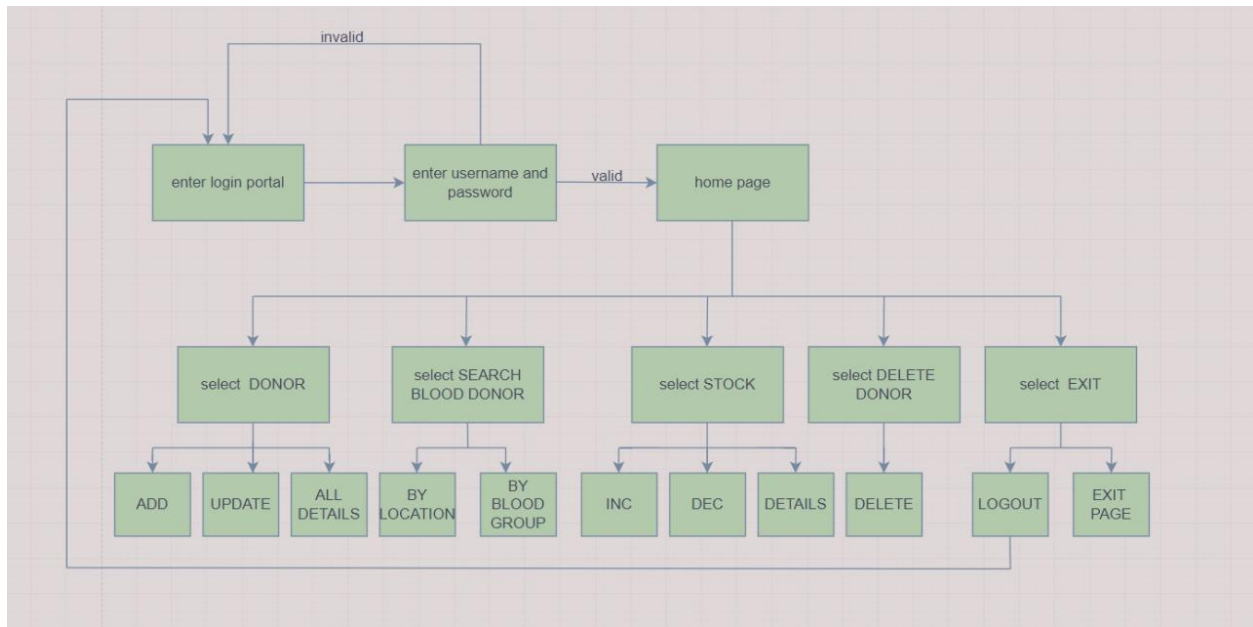

3. Find Donors:

- Facilitating efficient donor retrieval based on location and required blood group through robust search functionalities.

MODULES

1. **Admin Login:** Username and password to be entered to access home page.
2. **Home Page:** contains 5 options DONOR, SEARCH, STOCK, DELETE and EXIT.
3. **Add donor details:** donor details like name, number, blood group, DOB, gender, email, city, address, father's name and mother's name will be stored.
4. **Update donor details:** donor details can be updated here.
5. **Delete donor details:** donor details can be deleted.
6. **Display Donor Details:** displays the complete details of donor.
7. **Search donor based on blood group:** a donor can be searched on the basis of blood group.
8. **Search donor based on location:** a donor can be searched on the basis of blood group.
9. **Show Stock Details:** blood group along with its units available will be displayed.
10. **Increase stock:** current stock can be increased.
11. **Decrease Stock:** current stock can be decreased.

UML DIAGRAM

JAVA CONCEPTS IMPLEMENTED

DEPENDENCIES:

- Java Development Kit (JDK)
- NetBeans IDE for Java development
- MySQL Connector/J for JDBC connectivity

CONCEPTS:

- Classes and objects to store the information given during registration and to use and display when required.
- Methods to perform specific tasks and return result to user.
- Java Swing for GUI
- MySQL Database integration
- User authentication and authorization
- Event-driven programming for handling user actions
- Using prepared Statements to execute SQL Queries with placeholders

CODE

MySQL QUERIES:

Create database bbms;

Use bbms;

```
CREATE TABLE donor (  
    donorId INT NOT NULL PRIMARY KEY,  
    name VARCHAR(50),  
    fatherName VARCHAR(50),  
    motherName VARCHAR(50),  
    DOB VARCHAR(20),  
    MobileNo VARCHAR(10),  
    gender VARCHAR(10),  
    email VARCHAR(100),  
    bloodGroup VARCHAR(10),  
    city VARCHAR(50),  
    address VARCHAR(300)  
);
```

```
CREATE TABLE stock (  
    bloodGroup VARCHAR(20),  
    units INT  
);
```

JAVA CODES:

login.java

```
import javax.swing.JOptionPane;
```

```

DONATE BLOOD - SAVE LIVES

CONCLUSION

Blood bank management systems (BBMS) play a critical role in modern healthcare, ensuring the efficient and safe collection, storage, and distribution of blood. By automating manual processes, improving data accuracy, and streamlining workflows, BBMS contribute to saving lives and improving patient outcomes. As healthcare systems continue to evolve, BBMS will remain an essential tool for optimizing blood management and ensuring the availability of this life-saving resource.
